

The Earth

The Earth is our home planet, the place where we live. It's a big ball of rock and water that's floating in space. It's the only planet that we know of where life exists, with all the plants and animals we see around us.

The Earth is really special because it has everything we need to survive - air, water, and food. We can see the sky above us when we look up, and sometimes we see the sun, moon, and stars too. Earth spins around and around, which makes the sun rise and set and gives us day and night. And it goes around the sun, which takes a whole year to complete!

We can see the sun during the day, and the moon and stars at night. Earth also has different kinds of weather like rain, snow, sunshine, and wind. It's also the only planet we know of that has lots of different kinds of animals and plants.

The Earth has different parts to it, like the land, the oceans, mountains,

forests, beaches, and the atmosphere. The land is where we live and walk around, the oceans are huge bodies of water that cover most of the planet, and the atmosphere is the layer of air around the Earth that we breathe. We can travel to different places on Earth by car, plane, or boat.

Let's check what you learned:

1. **What is the Earth?**
2. **What is the Earth made of?**
3. **What makes the Earth special?**
4. **What is the atmosphere?**
5. **Why can we breathe on Earth?**
